A wide variety of standard and custom pins and receptacles for automated manufacturers of industrial lighting and power distribution products are being introduced by ETCO Incorporated of Bradenton, Florida.

ETCO Pins & Receptacles are manufactured from brass and tinned brass, or other metals and are supplied in strip form on reels for manufacturers of industrial lighting products using automated attachment equipment. Designed for 12 to 18 Ga wire, they feature an open barrel "F" crimp which surrounds the wire without crushing it; assuring a high-integrity connection.

Available from stock for immediate delivery for a wide range of popular lighting applications, ETCO Pins come in standard diameters ranging from 0.062" to 0.187" dia. and the receptacles correspond in terms of diameter measurement. Other uses for pins and receptacles include appliance, automotive, custom power and other applications.

ETCO Pins & Receptacles are priced according to material, size and quantity. ETCO has over 74 years of experience.
